

## LIST OF FIGURES

Images in this thesis are presented in color

1.1	Schematic representation of reciprocal repression of transcription factors regulating IgM expression in differentiating B-cells . . . . .	7
1.2	Signaling occurring in B-cells as a result of LPS binding to TLR4 . . .	12
1.3	Schematic representation of Akt signaling . . . . .	16
1.4	TCDD signaling through the AhR . . . . .	20
2.1	AFCs as a function of treatment with LPS and TCDD . . . . .	35
2.2	RAMs in splenocytes . . . . .	45
2.3	Common targets of annotated genes . . . . .	55
2.4	Hypothesized regulatory interactions in splenocytes following LPS and 30 $\mu$ g/kg TCDD+LPS treatments . . . . .	56
3.1	Treatment-related changes in splenocyte gene expression . . . . .	74
3.2	Hypothesized significance of interactions occurring in differentiating splenocytes . . . . .	81
S.1	Classification of RAM annotation based upon genomic location, as determined by BLAT search . . . . .	91
S.2	Regulatory interactions of annotated genes in 25 $\mu$ g LPS treatment . .	92
S.3	Regulatory interactions of annotated genes in 30 $\mu$ g/kg TCDD treatment. . . . .	93
