

4.3	NO_2^- -N, NO_3^- -N and NH_4^+ -N in surface waters along Beerburrum Creek and Six Mile Creek from headwaters to the outlet of the sub-catchment (0 km). Values in brackets show sampling site numbers. Inset: Distribution of sampling sites along the two creeks in the study area.	59
4.4	Longitudinal distribution of $\delta^{15}\text{N}$ signatures in surface waters along Beerburrum Creek and Six Mile Creek from headwaters to the outlet of the sub-catchment (0 km). Values in brackets show sampling site numbers. Inset: Distribution of sampling sites along the two creeks in the study area.	62
4.5	$\delta^{18}\text{O}_{\text{water}}$ and $\delta^2\text{H}_{\text{water}}$ values of the surface waters and groundwater of Beerburrum Creek and Six Mile Creek. The stable isotopic compositions of these waters were compared to the GMWL (Craig, 1961) and to the local Brisbane meteoric water line (LMWL, GNIP.	63
