

L^AT_EX 2.1.4 Issue(s)

February 18, 2016

I follow the bundled installer of L^AT_EX 2.1.4 install L^AT_EX on my Win XP PC for the first time, but cannot work correctly after the installation: Every time I launch L^AT_EX a window appears telling me that “no text class found” and the reconfiguration always fails. I also tried to use the installation version to reinstall L^AT_EX only but the problem is still there. I’m quite sure that the installation of MiK_TE_X as well as the specified path in L^AT_EX are complete and correct since later I tried to install L^AT_EX 2.0.0 and it works correctly. Actually this document is typeset with L^AT_EX 2.0.0 on my PC where L^AT_EX 2.1.4 fails. The same issue also takes place on my Win 7 64 bit laptop when I try to update L^AT_EX from 2.0 to 2.1.

For the details please refer to the following screenshots.
